

Clear Lights® is committed to clean air, healthy soil, and clean drinking water.

Our restorative repairs do not harm our environment.

Our restorations do not negatively affect any air or water quality standards.

We do not dump any chemicals or cause chemical waste.

Our company uses recycled copy paper, shop towels, paper towels, etc.

We reuse everything we possibly can until it is no longer usable, then, if allowed by our waste disposal provider, we recycle it.

As they are not recyclable, restoring your clients' headlights, as opposed to replacing them, literally keeps an amazing, hundreds of thousands of headlights out of our landfills each year!
